

VoxBox

Many organisations now regard voice processing as an important, or even vital management tool. Until recently, however, the purchasing of a voice processing system could be as expensive as the telephone system itself. This has been due to the expense of PC based systems, incorporating PC hardware and companion/expensive voice processing cards.

VoxBox from Oak is different. Incorporating extremely reliable solid state technology, VoxBox is a wall mounted voice processing system utilising flash memory technology. Available in either 2 or 4 port versions with 10 hours storage, VoxBox represents a breakthrough in both price and performance.

Subject to a support agreement, VoxBox is supported remotely by our trained technical staff at our dedicated Customer Service Centre.

Oak provide a full range of Voice Processing Systems, including UniVox with 500 mailboxes, 72 hours storage and email integration, the VoxPro range of PC based systems for larger applications and ProVoice, for Professional Voice Recording.

VoxBox represents a breakthrough
in **both price and performance.**
